LASER VIBROMETRY

Digital Laser Doppler Vibrometer
Nova-Series

SWIR Single-Point Laser Vibrometer

Vibrometry in the short-wave infrared range for maximum signal-to-noise ratio. Delivers best signal quality for dark or rough surfaces, biological tissue, as well as long working distances.

IDEAL FOR

- **Dark / rough surfaces**
- **Very high-frequency vibrations**
- **Biological surfaces**
- **Moving or rotating objects**
- **High speed vibrations up to 30 m/s**
- **Long distance measurements**

HIGH-END AND BEST-PERFORMANCE

The Nova Series Laser Vibrometer operates with an invisible SWIR laser (1550 nm). At a wavelength of 1,550 nm, ten times the laser power of a HeNe system is available for measurements without compromising the eye safety.

The Nova Series comes in when maximum dynamic range is required or every decibel of signal level counts. Typical use cases are surfaces that poorly reflect visible light, for example dark and rough surfaces or biological tissue. A high signal strength is also of vital importance for measurements over long distances, e.g. in civil engineering or aerospace.
